

SOLUTIONS TO HAND PROBLEMS, SECTIONS 4.1 & 4.2

JOHN E. HUTCHINSON

1. SECTION 4.1

p138: The left of Figure 4.4 shows a mathematical dendrite made up of three smaller dendrites. Denote the top left small dendrite by TL , the bottom left small dendrite by BL , and the bottom right small dendrite by BR .

Let the bottom right most point on the original dendrite be denoted by P .

Then BR is obtained as follows:

- (1) Scale the original dendrite by $1/2$ with P as the fixed point,
- (2) *Reflect* the result in the diagonal line from the top left point to the bottom right point P .
